1. Ballast must not be used in a de-lamp mode. Lamps must be changed when a single lamp fails.
2. Not for use in an enclosed fixture.

Notes:

- Ballast compatibility is for the primary number of lamps being operated on the ballast. Consult Universal for de-lamp application compatibility.
- Ballasts must be wired per their exact wiring instructions to ensure compatibility.

Using a lamp/ballast combination that is not compatible may lead to product failure that results in dangerous conditions and could cause property damage or personal injury.

Everline LED replacement lamps have been tested for compatibility with the ballasts listed on the chart (by Universal Lighting Technologies). **However, due to product changes by manufactures, compatibility is not guaranteed.** It is recommended that projects have test samples installed onsite. The ballast manufacturers listed have neither performed nor confirmed our testing results.

Universal Lighting Technologies will periodically update this list as more ballasts are tested. If a ballast does not appear on this list, it does not mean that it is not compatible. Please contact Universal at 1-800-225-5278 if you have any questions or concerns.
